

Education

Huazhong University of Science and Technology (HUST)	· Int'l Business + English (Dual Degree) · Bachelor	2023.09–2027.06
Core: Int'l Trade Practice, Cross-Border E-Commerce, Financial Analysis, Debate & Public Speaking CET-4/6, TEM-4, Mandarin 1-B		

Core Strengths

Full-Stack Delivery Solo ownership of 5 products from problem definition to code delivery: iOS native apps validated by App Store Connect, a live cloud vector search service handling 100K+ vectors, a decision memory prototype, and an AI hardware proposal winning **1st place** in Anker's product challenge. Hands-on experience across PRD drafting, Figma prototyping, Swift coding, and global launch.

Business & Operations Managed Amazon rating optimization and returns governance at eufy Germany (**100%** target rating achieved). Grounded in hardware return and review mechanics, driving product decisions through empirical customer feedback rather than unverified assumptions.

Project Experience

Artemi Smart Pet Collar · Anker Sailor Program Challenge	· Team Lead · Product Manager · 1st in Class	2026.07
Problem Insight & Value Proposition Analyzed top-selling overseas competitors (Tractive/Fi), identifying the flaw that they report raw data without explaining pet behavior; defined the "precise location + two-way audio + behavior explanation + camera handoff" feature set connected to eufy's smart home ecosystem.		
AI Boundaries & Anti-Hallucination Separated system responsibilities: sensors classify motion, cloud rule engine handles deterministic anomaly alerts, and LLMs only deliver empathetic narration— preventing AI hallucinations in critical decision loops .		
Pricing & GTM Avoided low-margin GPS tracker price wars by positioning as an "AI Pet Nanny"; set a cold-start goal of keeping the first 50 Amazon reviews at ≥4.3 rating ; delivered a runnable 5-screen native SwiftUI prototype.		
Gratia (哈喽卧得) · Cross-Border Mutual Wish-Fulfillment App	· Product Owner · Full-Stack Native Developer	2025.09–2026.08
From Coursework to Shipped App Began as a top-scoring e-commerce class project (99/100) and built into a complete product; wrote 11K lines of native SwiftUI on Cloudflare Serverless over 222 git commits ; Build 16 passed official App Store Connect processing.		
Iteration & Commercial Sunsetting Tested a WeChat Mini Program version before committing to native iOS for better interaction; automated 4-tier content moderation to remove manual overhead; calculated overseas user acquisition costs during launch and made the rational call to sunset the app.		
BiaoqingLao (表情捞) · Instant Image Feature Retrieval Service	· Solo Product Definition & Build · Live Service	2026.08–Present
Pain Point & Live Cloud Service Solved image degradation from repeated sharing in messaging apps, compressing multi-step search into instant high-res retrieval. Extracted features on-device via Apple Vision to protect user privacy; built a live public search service over 28K+ images and 116K vectors .		
Governance & Safe Harbor Established a " 4-hour review response + 24-hour takedown " safe-harbor workflow for UGC assets with absolute veto on minor protection, balancing agile launch with legal safety.		
Decision Path (未选择的路) · Cognitive Decision Memory Hub	· Solo Product Definition · PRD & Native Prototype	2026.08–Present
Scenario Focus & Rebuilt from Audit Designed for high-stakes crossroads while rejecting check-in streaks that hijack attention; overturned v0.1 defect requiring 4–8 weeks of data, rebuilding for instant n=0 value: gesture slider records expectations at choice time to immediately contrast with post-decision reality ("predicted 4/10, experienced 7/10") .		
Tone Constraints & Validation Strictly limited AI tone based on entry count (factual only when data is scarce, never guessing causality) to prevent model over-interpretation ; verified inquiry value through follow-up text rate (42.8%), median hesitation (24.6s), and choice pivot rate (18.2%); delivered 5,253 lines of native prototype.		
The N+1th Player (第 N+1 人) · Board Game Host App (App Store Global)	· Solo Product Definition · Native Build	2026.08–Present
Scenario & Frictionless Gameplay Replaced the need for a human referee who sacrifices their own playtime; shipped 17 party games with three dead-simple modes (Tabletop Center / Pass-the-Phone / Local Direct) for zero learning curve.		
Deterministic Rules & Spoken Parsing Enforced 100% deterministic code state machine for win/loss conditions with LLMs handling only contextual narration; supported spoken house-rule modifications with 52 universal rule switches for automatic validation; authored 95 files, 11.5K lines of SwiftUI, and passed App Store review.		

Work Experience

Anker Innovations · eufy Smart Home Division	· UX & GTM Product Intern · European Market (DE / FR / NL)	2026.07–Present
Feedback Loop & Returns Reduction Overcame Amazon seller contact limits by cross-matching review keywords with customer support tickets; pinpointed root causes (48% manual translation ambiguity, 34% pairing timeout, 18% hardware defect), driving manual revisions and onboarding redesign; achieved 100% target rating with reduced returns.		
Flagship Launch & Service QA Coordinated launch service for European flagships (E35 vacuum, C30 security), signing off German/French/Dutch How-to videos (intercepting serial number leaks and model mismatches); turned complex error codes into user-friendly troubleshooting guides, delivering 32 articles and 20 PN support workflows.		
Data Dashboard & Automation On Day 2 , automated multi-sheet reconciliation with Python scripts, cutting manual daily reporting from half a day to 20 minutes as a permanent team tool.		
Shengtian Network (SZ: 300494)	· Operations Intern · Gaming & Content	2026.02–2026.05
Content Strategy & Automation Created game guides and articles based on player feedback, averaging 2,000+ PV and boosting membership conversion by 20% ; managed distribution and analytics for 50+ promo videos; co-developed Playwright publishing scripts with engineering.
